DETAILED ACTION

This Office Action is in response to Applicants' amendments filed on January 3, 2006.

Claims 2 and 4-9 are pending.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 2, 4-9 are rejected under 35 U.S.C. 102(a) as being anticipated by US patent 6,571,934 to Thompson et al.

Thompson et al teach a system for bi-directional shuttling cuvettes throughout an analyzer. The system comprises a single bi-directional linear device transport mechanism (90LT) that includes a single input-output lane (72/74) formed along the operating surface. See figure 3. At col. 8, lines 55-58, Thompson et al teach that after liquid is aspirated into the sample tube rack (42), a shuttle mechanism positions the sample rack onto the bi-directional transport lane, as recited in claim 2. The sample tube rack is equivalent to the container loading tray. The reference also teaches a shuttle mechanism (80, 80A), sample tube rack (42) and buffer zone (84) for storing the sample tube rack. The system also contains temporary storage areas (20, 22, 24). With respect to claim 4, Thompson et al teach concentric carousels having an outer carousel (14) and an inner carousel (16). Shuttle mechanism (80) serves a first transfer device, while shuttle mechanism (80A) serves as a second transfer device. Thompson et al further teach a reaction carousel (12) having reaction vessels (19), as recited in claim 6 (col. 7, lines 1-3).

Response to Arguments

3. Applicant's arguments filed January 3, 2006 have been fully considered but they are not persuasive. Applicants argue that the new claim amendments define over the Thompson et al reference. The Examiner disagrees since Thompson et al teach cuvette racks (container trays), inner and outer carousel, storage areas and a bi-directional linear shuttle.
